How to obtain the Technicare Remote Order Entry System (ROES) link

To obtain a link to the ROES you must have a current professional account with Technicare Imaging Ltd. or associated companies. If you already have a professional account contact your closest branch (info above) and request a link to ROES, if you do not have a professional account then you must obtain one. To obtain a professional account an application must be submitted, printing and completing the [Account Application](#) and delivering (email, fax, mail, personal delivery, etc.) to your closest office (info above). When your account is approved the ROES link will be forwarded to the email address (primary contact) provided.

What to do after you have obtained your ROES link

After you receive the email containing the ROES link and your account information, read/review/download the [tutorial](#) (attached to the email or on this site) – full instructions as to installation, setup and usage are provided.

A short word on color management

To obtain consistent and predictable prints from your images a color measurement device should be used. A color measurement device like the "[GretagMacBeth Eye-One Display 2](#)" should be used on a regular basis to establish and maintain a "calibrated" system.
