ACRYLIC MOUNTING

Technicare PREMIER PHOTO LAB

How to hang acrylic prints with drilled standoff posts

1 Measure the distance between the drilled holes.

2 With a level plot the holes on a wall.

3 Place the print over the holes to make sure they line up correctly*

4 Drill pilot holes for the drywall plugs

5 Hammer in drywall plus

6 Screw in bottom thread onto the wall

7 Screw the post onto the bottom thread

8 Place print on top of posts

9 Screw the caps onto the posts

* You could always skip steps 1 & 2 and simple hold the print up on the wall and mark the holes, but this can be hard to do (and get square) on one's own.
